

Class 10 - Biology Unit Test

Time: 1 hour

Answer all questions. Marks are shown in brackets.

1. Which blood vessel carries blood away from the heart? [2]
2. Which of the following organelles is primarily involved in photosynthesis? [2]
3. Explain the role of chloroplasts in photosynthesis, naming the main pigments involved and briefly outlining the two major stages of the process. [5]
4. Describe the flow of blood through the human heart starting from the right atrium and ending at the aorta; include the names of valves crossed. [5]
5. Describe the process of transpiration in plants in two to three sentences and name two environmental factors that increase its rate. [4]
6. Explain how the structure of xylem vessels facilitates water transport in plants (mention one structural feature and its role). [3]
- 7 (a) A diagram shows two potted plants. Plant A in bright light with broad green leaves, Plant B kept in dim light with pale, elongated leaves. Explain why Plant B looks different. [3]
- 7 (b) Suggest one practical measure to help Plant B recover. [2]
8. A resting person has a tidal volume of 0.5 L and breathes 12 times per minute. If dead space is 0.15 L per breath, calculate the alveolar ventilation per minute. Show your working. [4]
